

WHAT PROBLEMS COULD POOR DENTAL HEALTH CAUSE?

Studies show that poor oral health can be linked to many systemic diseases.

A person with periodontal disease is more likely to develop conditions such as diabetes, heart disease, and Alzheimer's disease.

Oral Health and Disease Prevention

Presented By:
NAU Dental Hygiene
Students

What is Periodontal Disease?

- Inflammation of the gingiva (gums), alveolar bone, and periodontal ligament
- Causes bone loss, recession, and tooth loss
- Disease progression can be stopped with treatment by dental professionals and proper home care
- Periodontal disease can be linked to other health problems

Why are regular dental visits important?

- Prevention, detection and maintenance of oral and systemic diseases and oral cancer
- Saves money in the long run

What can you do to prevent periodontal disease?

- Brush teeth twice daily or after meals
- Use a soft-bristle toothbrush to softly brush gum line
- Floss daily
- Use fluoridated mouth rinse
- Watch sugar intake
- Utilize preventative care
- Avoid risks such as smoking or tobacco use
